Work Experience

ExodusPoint Capital Management

Aug 2024 – Present

Full Stack Engineer | Java, React, Python, Distributed Systems, AWS, CI/CD, SQL, Observability

New York, NY

- Designed and shipped a real-time risk alerting workflow that converted noisy signals into actionable alerts; reduced manual triage by 40% and improved response time by 25% through automation and clearer routing logic.
- Optimized SQL queries and stored procedures over multi-million-row datasets; reduced end-to-end processing time by 50% and improved run stability for critical risk calculations.
- Built Python automation for daily analytics and reporting with validation checks and repeatable runs; improved turnaround by 35% and reduced recurring operational overhead.
- Delivered low-latency REST APIs for internal risk services; removed query bottlenecks and improved request paths to achieve sub-100ms performance on critical endpoints.

TurboHire

Apr 2021 – Jun 2022

Founding Full Stack Developer | React, TypeScript, Java, React Native, Oracle SQL, Docker, Azure DevOps Hyderabad, India

- Owned end-to-end delivery of SaaS features across web, mobile, and backend services; partnered with product to ship iterative releases and improve release predictability.
- Built and shipped core workflows (candidate cards, offer-letter flow) and improved release quality via structured code reviews, CI pipelines, and disciplined delivery through Azure DevOps.
- Improved performance and maintainability of data-heavy screens and service interactions; increased UI code efficiency by 40% and reduced recurring defects through refactoring and stronger contracts.
- Mentored and coordinated 4 engineers through task breakdown, code reviews, and clean handoffs, improving execution consistency across sprints.

OpenText Technologies

Oct 2019 – Apr 2021

Software Engineer | Java, OT Cloud, Scala, Spark, Microservices, SQL, Angular

Hyderabad, India

- Built backend microservices for an enterprise BI reporting platform, using Java/Scala and Spark-based processing with SQL-backed storage for analytics workloads.
- Optimized Spark jobs and query patterns to reduce average API response time by 65%, improving throughput and user experience for reporting endpoints.

Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, HTML, CSS, Swift

Backend: Spring Boot, REST APIs, Distributed Systems, Microservices, Multithreading, System Design, Design Patterns

Cloud/Infra: Kubernetes, Docker, AWS (EC2, S3, Lambda, API Gateway), CI/CD (Jenkins, GitLab CI), Azure DevOps

Data/Streaming: Kafka, Snowflake

Databases: SQL Server, PostgreSQL, MySQL, MongoDB

Observability: Grafana, Datadog, Splunk | **Tools:** Git/GitLab, Material-UI, iOS, SwiftUI, Xcode

Education

University of Southern California

Aug 2022 – May 2024

Master of Science in Computer Science (CGPA: 3.9/4.0)

Los Angeles, CA

Relevant Coursework: Operating Systems, DBMS, Machine Learning, Applied NLP, Web and Mobile App Development.

Projects

Renewable Energy Analytics

Oct 2025

React, Python, OAuth 2.0, Data Pipelines, LLM Integrations

- Built a React web app to visualize energy consumption/generation trends with filters and dashboard views; implemented OAuth 2.0 authentication and ingestion pipeline.
- Added time-series summaries and insights over user-selected slices using LLM integrations to improve interpretability of trends.

Event Search Web and iOS App

Apr 2025

Python, Flask, iOS (Swift), SwiftUI, REST APIs, GCP

- Built REST APIs in Python/Flask and integrated web + iOS clients for search and filtering, rendering JSON responses into card/list views with clean error handling.
- Deployed on GCP and improved API responsiveness via pagination, caching, and robust error handling.
